

Exercise 3: Assertions in JUnit

Scenario:

You need to use different assertions in JUnit to validate your test results.

Steps: 1. Write tests using various JUnit assertions.

Solution Code:

```
public class AssertionsTest {  
  
    @Test  
    public void testAssertions() {  
  
        // Assert equals  
        assertEquals(5, 2 + 3);  
  
        // Assert true  
        assertTrue(5 > 3);  
  
        // Assert false  
        assertFalse(5 < 3);  
  
        // Assert null  
        assertNull(null);  
  
        // Assert not null  
        assertNotNull(new Object());  
    }  
}
```

OUTPUT: test passed
